

# **Annual Performance Reports: 2003-2004 State Assessment Data**

**Summary Prepared by:  
Martha Thurlow, Ross Moen, Jason Altman  
National Center on Educational Outcomes (NCEO)**

**June, 2006**

The information in this summary is based on data submitted in states' Annual Performance Reports to the U.S. Department of Education. Corrections or updates to those reports that were submitted by March, 2006 to the U.S. Department of Education are reflected in this summary.

## Overview

States and other educational entities receiving Part B funding under the Individuals with Disabilities Education Act (IDEA) submitted their Annual Performance Reports to the U.S. Secretary of Education on or before March 31, 2005. These reports contained information on a variety of indicators, including assessment participation and performance results for 2003-2004 state assessments. This document is a summary of the 2003-2004 state assessment information submitted by states in their Annual Performance Reports.

It is important to recognize that the information submitted in a state's Annual Performance Report may or may not be publicly reported by the state. The National Center on Educational Outcomes (NCEO) regularly analyzes assessment information that is publicly reported by states (see Klein, Thurlow, & Wiley, 2006; Thurlow & Wiley, 2004; Thurlow, Wiley, & Bielinski, 2003; Wiley, Thurlow, & Klein, 2005). NCEO also analyzed states' Biennial Performance Reports that included assessment data for the 2000-2001 year (Thurlow, Wiley, & Bielinski, 2002) and states' Annual Performance Reports that included assessment data for the 2002-2003 school year (Thurlow, Moen, & Wiley, 2005).

The assessment information included in the Annual Performance Reports of regular states (n = 50) and unique states subject to IDEA requirements (n = 10; see box below for a list of unique states) is summarized in two sections in this report:

- Participation in 2003-2004 State Assessments (see page 5)
- Performance on 2003-2004 State Assessments (see page 29)

The information in the above sections is supported by state-by-state data in the appendices. Appendices A and B provide the participation and performance data used to create the tables and figures in this document. Appendices C and D include a summary of all of the participation and performance data states submitted in their 2003-2004 Annual Performance Reports of state assessment data.

<p><b>Unique States:</b> American Samoa (AS), Bureau of Indian Affairs (BIA), Commonwealth of the Northern Mariana Islands (CNMI), District of Columbia (DC), Federated States of Micronesia (FSM), Guam (GU), Palau, Puerto Rico (PR), Republic of the Marshall Islands (RMI), Virgin Islands (VI)</p>
---

## Participation in 2003-2004 State Assessments

Four tables and fourteen figures are included in this section. A brief description of overall findings is provided for each table and figure. In addition, decisions made about the data included in the table and figures are clarified here.

### **Table 1. Number of States with Participation Data for All 3 School Levels (Elementary, Middle, and High School) and Both Reading and Math (Regular and Alternate Assessment)**

***Finding:** States have been required by the No Child Left Behind Act (NCLB) to test students at least once at the elementary, middle, and high school levels since 2001-2002. They have also been required to test students annually in both reading and mathematics. This table shows that all but a handful of states presented participation data for both reading and mathematics at all three school levels for their regular and alternate assessment in 2003-2004. Although there were slight differences from 2002-2003 to 2003-2004 in the numbers of states reporting on the participation for all levels for both reading and math, overall the differences were negligible.*

**Explanation:** The numbers in this table represent states that provided participation data in both reading and mathematics for elementary, middle, and high school levels. Specific sections of data from certain states were not counted for several reasons, such as the state being excused from filing an APR in 2003-2004, or the state not having data for the 2003-2004 school year. Other reasons why participation data could not be counted at the high school level were that tests were end of course tests and were administered only at the completion of certain classes and not by grade level. To be counted, states needed to provide the number of students tested on the assessment and other data, such as enrollment counts, the number of students who were absent, exempt, and so on.

### **Figure 1. Amount of Participation Data Reported for the Regular Assessment**

***Finding:** A total of 46 regular states and 5 unique states provided participation data in reading and math at the elementary, middle, and high school level for their regular assessment. Those regular states without full data either provided both reading and math data but were missing data for one grade level (high school), or provided all grade levels but provided only one content area (reading), whereas for unique states those without full data were all missing all data.*

**Explanation:** This figure shows which data were missing for states that lacked some regular assessment participation data in reading or math at the elementary, middle, or high school level.

**Figure 2. Amount of Participation Data Reported for the Alternate Assessment based on Alternate Achievement Standards**

***Finding:** A total of 44 regular states and 5 unique states provided participation data in reading and math at the elementary, middle, and high school level for their alternate assessment based on alternate achievement standards. Most regular states with less than full data failed to provide data at all three levels (elementary, middle, and high school), whereas those unique states with less than full data did not provide participation data at all.*

**Explanation:** This figure shows which data were missing for states that lacked some alternate assessment participation data in reading or math at the elementary, middle, or high school level. Alternate assessments based on alternate achievement standards included any out of level tests that states administered.

**Figures 3-5. Reading Assessment Participation Rates in Elementary, Middle, and High School: Percent Participation of IEP Enrollment (Includes Regular and Alternate Assessments)**

***Finding:** The percent of students tested on the reading assessment is shown in these figures for those states for which a rate could be calculated. At the elementary level, 38 regular states and 2 unique states had what was considered an acceptable participation rate of 95% or more. Most of the regular states below the 95% participation mark were within 10 percentage points of it at the elementary level. At the middle school level, 34 regular states and 1 unique state had the acceptable participation rate of 95% or more; again most regular states not reaching that rate were within 10 percentage points of it. At the high school level, 26 regular states and 0 unique states had the desired participation rate range; almost half of those not reaching the desired rate did not make it to within 10 percentage points of 95%.*

**Explanation:** Participation rates were calculated by dividing the number of students assessed in reading by the IEP enrollment. This produces a rate that is the percent of students with IEPs who were tested on the regular assessment and the alternate assessments (those based on alternate achievement standards and on grade level achievement standards). Rates in the range of 95%-105% are desired. Percentages that are slightly larger than 100% can be explained by factors such as counting IEP enrollment at a different time of year than when the assessments are administered. When the participation percentage is larger than 105%, the most likely explanation is that students were reported as participating in more than one of the two types of assessment in a single content area (regular and alternate). Such reporting redundancy prevents accurate calculation of participation or performance percentages, and is explained in the directions for the Annual Performance Report.

**Figures 6-8. Mathematics Assessment Participation Rates in Elementary, Middle, and High School: Percent Participation is of IEP Enrollment (Includes Regular, and Alternate Assessments)**

***Finding:** The percent of students tested on the mathematics assessment is shown in these figures for those states for which a rate could be calculated. At the elementary level, 40 regular states and 1 unique state had what was considered an acceptable participation rate of 95% or more. Most of the regular states below the 95% participation rate were within 10 percentage points of it at the elementary level. At the middle school level, 38 regular states and 2 unique states had an acceptable participation rate of 95% or more; again most regular states not reaching that rate were within 10 percentage points of it. At the high school level, 29 regular states*

*and 1 unique state had the desired participation rate range; slightly more than one-third of the regular states not reaching the desired rate did not make it to 85% participation. In comparing reading and mathematics assessment participation, more states had acceptable participation rates in mathematics than in reading at each grade level. Still, for both content areas, the number of states demonstrating the desired participation rates decreased with increased school level.*

**Explanation:** Data for these figures were calculated in the same way as for Figures 3-5.

**Table 2. Percent of Students with IEPs Participating in an Alternate Assessment Based on Grade Level Achievement Standards**

***Finding:** Three states offered to students with IEPs an alternate assessment based on grade level achievement standards. In these states, between 0.1% and 12.0% of students with IEPs participated in this assessment.*

**Explanation:** The percent of students with IEPs participating in an alternate assessment based on grade level achievement standards was calculated by dividing the number of students participating in alternate assessments based on grade level achievement standards, by the number of students with IEPs. States not using an alternate assessment based on grade level achievement standards are not shown in Table 2. In Appendix A, these numbers are merged with the regular assessment participation data. However, they are available in Appendix C.

**Table 3. Mean Percentage and Range in Percentages of Students with IEPs Taking Regular Assessments with Accommodations**

***Finding:** The percent of students with IEPs taking the regular reading and math assessments with accommodations is shown in this table. Not all states were able to document the number of students using accommodations in 2003-2004. However, if a state documented accommodations at one school level, it also documented it at other school levels. The data show that a slightly higher percentage of students used accommodations at the elementary level than at the high school level for both reading and mathematics assessments. In general, approximately 61%-65% of students with IEPs used accommodations on the regular assessment.*

**Explanation:** The percentage of students with IEPs taking the regular assessment with accommodations was calculated by dividing the number of students reported as assessed with accommodations by the total number of students with IEPs. Only data from the grade specified by individual states as elementary, middle school, or high school level was used to complete this table. For states that reported rates of accommodations greater than 100%, their data was shown as 100%. States who reported greater than 100% reveal that something like double counting or including data from students without IEPs in accommodations numbers occurred. This may have been the case with other states, but was most apparent when states reported numbers greater than 100%. States who reported a rate of usage of 0% were assumed to have not tracked accommodations usage.

**Table 4. Percentage of invalid scores (where >5% of Students with IEPs Took Assessments with Invalidating Practices)**

***Finding:** A small number of states (n=5) had a high percentage of students with IEPs take regular assessments in a way that produced invalid scores. Of the elementary, middle, and high school reading and math assessments (six possible assessments), all were considered to have a high percentage of invalid practices (>5% of scores) in two states; three of the six assessments were considered to have a high percentage of invalid practices in another states, and one of the six assessments in two states. The percentages of invalid scores ranged from 5.3% to 68.5% of assessments within a content and level.*

**Explanation:** The percent of regular assessments taken by students with IEPs resulting in invalid scores (as defined by OSEP) was calculated by dividing the number of invalid practices reported on the regular assessment, by the number of students with IEPs, and those above 5% identified. The number of students receiving invalid practice is defined by OSEP as the subset of students with IEPs who took a regular assessment on grade level achievement standards, but changes to the assessment invalidated their score for purposes of aggregation or reporting.

**Figures 9-11. Reading Alternate Assessment Based on Alternate Achievement Standards Participation Rates in Elementary, Middle, and High School: Percent Participation of IEP Enrollment**

***Finding:** The percent of students with IEPs assessed through a reading alternate assessment based on alternate achievement standards is shown in these figures. At the elementary level, 35 regular states and 4 unique states assessed 9% or less of students with IEPs in the alternate assessment based on alternate achievement standards (9% is approximately equal to 1% of the total student population). At the middle school level, 38 regular states and 3 unique states tested 9% or less, and at the high school level, 33 regular states and 4 unique states tested*

*9% or less of students with IEPs in the alternate assessment based on alternate achievement standards. The numbers of states assessing more than 9% of students with IEPs on alternate assessments based on alternate achievement standards was 12 regular states and 1 unique state at the elementary level, 9 regular states and 2 unique states at the middle school level, and 14 regular states and 1 unique state at the high school level. Most of the percentages were under or near the 9-10% figure; in a few states, percentages of students with IEPs in alternate assessments based on alternate achievement standards reached as high as 36% to 63%.*

**Explanation:** Participation rates were calculated by dividing the number of students assessed with a reading alternate assessment based on alternate achievement standards by IEP student enrollment for the grade level. Note that in 2003-2004, out-of-level were counted as alternate assessments based on alternate achievement standards for the purposes of participation, and alternate assessments on grade-level achievement standards were counted as regular assessments. Participation rates based on total student enrollment can be found in Appendix A.

#### **Figures 12-14. Mathematics Alternate Assessment Based on Alternate Achievement Standards Participation Rates in Elementary, Middle, and High School: Percent Participation of IEP Enrollment**

***Finding:** The percent of students with IEPs assessed through a mathematics alternate assessment based on alternate achievement standards is shown in these figures. At the elementary level, 38 regular states and 4 unique states tested 9% or less of students with IEPs in the alternate assessment based on alternate achievement standards (9% is approximately equal to 1% of the total student population). At the middle school level, 39 regular states and 3 unique states tested 9% or less, and at the high school level, 31 regular states and 5 unique states tested 9% or less of students with IEPs in the alternate assessment based on alternate achievement standards. The numbers of states assessing more than 9% of students with IEPs on alternate assessments based on alternate achievement standards was 11 regular states and 1 unique state at the elementary level, 10 regular states and 2 unique states at the middle school level, and 13 regular states and no unique states at the high school level.*

**Explanation:** Data for these figures were calculated in the same way as for Figures 9-11.

**Table 1. Number of States with Participation Data for All 3 School Levels (Elementary, Middle, and High School) and Both Reading and Math**

	<b>Regular Assessment</b>		<b>Alternate Assessment Based on Alternate Achievement Standards</b>	
<b>Year</b>	<b>Regular States</b>	<b>Unique States</b>	<b>Regular States</b>	<b>Unique States</b>

## Performance on 2003-2004 State Assessments

One table and fourteen figures are included in this section. A brief description of overall findings is provided for each table and figure. In addition, decisions made about the data included in the table and figures are clarified here.

### **Table 5. Number of States with Performance Data for All 3 School Levels (Elementary, Middle, and High School) and Both Reading and Math**

**Finding:** *This table shows that all but a handful of states provided performance data for both reading and mathematics at all three school levels for their 2003-2004 regular and alternate assessments based on alternate achievement standards. The numbers have remained about the same as they were for the 2002-2003 assessments. States have been required to report on the test performance of students at least once at the elementary, middle, and high school level since 2001-2002 in both reading and mathematics.*

**Explanation:** The numbers in this table represent states that provided performance data in both reading and mathematics for elementary, middle, and high school levels. Data from certain states were not counted for several reasons, such as being excused from filing an APR in 2003-2004, an inability to provide numbers as required, and not reporting performance data in 2003-2004. To be counted, states needed to provide the number of students tested on the assessment and enrollment counts.

### **Figure 15. Amount of Performance Data Reported for the Regular Assessment**

**Finding:** *Forty-seven regular states and four unique states provided performance data in reading and math at the elementary, middle, and high school level for their regular assessment. Two regular states and six unique states did not provide any performance data.*

**Explanation:** States are identified in this figure using the same criteria that were used for Table 5.

## **Figure 16. Amount of Performance Data Reported for the Alternate Assessment based on Alternate Achievement Standards**

***Finding:** Forty-two regular states and four unique states provided performance data in reading and math at the elementary, middle, and high school level for their alternate assessment based on alternate achievement standards. Only 3 regular states and 6 unique states did not provide any performance data for their alternate assessment based on alternate achievement standards.*

**Explanation:** States are identified in this figure using the same criteria that were used for Table 5.

## **Figures 17-19. Reading Assessment “Proficient” Rates in Elementary, Middle, and High School: Percent Proficient of IEP Enrollment (Includes Regular and Alternate Assessments)**

***Finding:** For those states for which rates of students “proficient” could be calculated for the reading assessment, generally about 30% of students on IEPs performed at a level considered proficient. (This is up slightly from 2002-2003 when generally less than 30% of students on IEPs performed at a level considered proficient.) The number of states with 30% or more students on IEPs proficient was 32 regular and 0 unique states at the elementary school level, 15 regular and 0 unique states at the middle school level, and 17 regular and 0 unique states at the high school level.*

**Explanation:** The percent of students scoring as proficient on state assessments was calculated by dividing the number of students who were proficient and above according to each state’s criteria on either the regular or alternate assessment by the number of students with IEPs in the state (i.e., IEP Enrollment). These figures add together the percent of students proficient on the regular assessment plus the percent of students proficient on the alternate assessments (both those based on grade-level achievement standards and those based on alternate achievement standards), thus providing the total number of students with IEPs who were proficient in the state assessment program in 2003-2004.

Several states are missing proficiency percentages in the figures. In addition to missing data (indicated by “md”) and wrong year data (indicated by “yr”), which were described in the Participation section, one state provided only the percent of students in each proficiency level rather than the raw numbers as instructed in the APR directions. Because numbers are needed to check the denominator used to calculate percentages, when only the percentages were provided they were not reported (indicated by “pr”).

Two cautions are indicated for proficiency percents reported in the figures. First, percents must be viewed with caution when the **regular assessment participation rate** for the same content and school level was **greater than 105%**. These are indicated with an asterisk (\*). When participation percentages are inflated (i.e., above 105%), proficient percentages are likely to be inflated as well. Second, percents must be viewed with caution when the **alternate assessment proficiency rate** for the same content and school level was **greater than 1% of the total student population** (approximately 10% of IEP enrollment). These are indicated by a bullet (●). The U.S. Department of Education's directions to states indicated that scores from the alternate assessment should be placed within the lowest proficiency level if they accounted for more than 1% of the total population of students, but not all states did this.

**Figures 20-22. Mathematics Assessment “Proficient” Rates in Elementary, Middle, and High School: Percent Proficient of IEP Enrollment (Includes Regular and Alternate Assessments)**

***Finding:** For those states for which rates of students “proficient” could be calculated for the math assessment, generally about 30% of students on IEPs performed at a level considered proficient. (As for reading, this is up slightly from 2002-2003 when generally less than 30% of students on IEPs performed at a level considered proficient.) The number of states with 30% or more students on IEPs proficient was 33 regular and one unique state at the elementary school level, 12 regular and 0 unique states at the middle school level, and seven regular and 0 unique states at the high school level.*

**Explanation:** The percent of students scoring as proficient on state assessments was calculated in the same way as for the reading assessments. The same explanations for the data summary and the same cautions apply.

**Table 6. Review of States Counting More Than 1% Total Student Enrollment as Proficient on Alternate Assessment Based on Alternate Achievement Standards**

***Finding:** Ten states counted more than 1% of total student enrollment as proficient on an alternate assessment on alternate standards. Two states counted more than 1% of total student enrollment as proficient on just one test in their system, while two states counted more than 1% of total student enrollment as proficient on every one of the tests in their system. Just less than half of these tests occurred at the high school level (n=12), and there was negligible difference in the frequency of such tests and the content area. Michigan, Mississippi, and Texas were the only states that counted more than 2% of total enrollment as proficient.*

**Explanation:** Participation rates were calculated by dividing the number of students assessed with a reading or mathematics alternate assessment based on alternate achievement standards by total student enrollment for the grade level.

**Figures 23-25. Reading Assessment Proficiency Rate Improvement in Elementary, Middle, and High School (Includes Regular and Alternate Assessments)**

***Finding:** For those states for which proficiency rate change between 2002-2003 and 2003-2004 could be calculated for the reading assessments, improvement was noted in 31 regular states at the elementary level (of 44 with data for both years), 32 regular states at the middle school level (of 43 with data), and 29 regular states at the high school level (of 42 with data). Only one unique state showed an increase in proficiency rates from 2003-2003 to 2003-2004 (of 4 with data for both years).*

**Explanation:** The calculated percent of students scoring as proficient on state assessments in 2002-2003 was subtracted from the calculated percent of students scoring as proficient on state assessments in 2003-2004 leaving the percent change in proficiency percentage. A (+) indicates improvement, and a (-) indicates a decline in proficiency rate.

**Figures 26-28. Mathematics Assessment Proficiency Rate Improvement in Elementary, Middle, and High School (Includes Regular and Alternate Assessments)**

***Finding:** For those states for which proficiency rate change between 2002-2003 and 2003-2004 could be calculated for the mathematics assessments, improvement was noted in 34 regular states at the elementary level (of 44 with data for both years), 36 regular states at the middle school level (of 43 with data), and 27 regular states at the high school level (of 41 with data). Two unique states showed an increase in proficiency rates on the elementary assessment, three on the middle school assessment, and two on the high school assessment (of four unique states with data for both years in each case).*

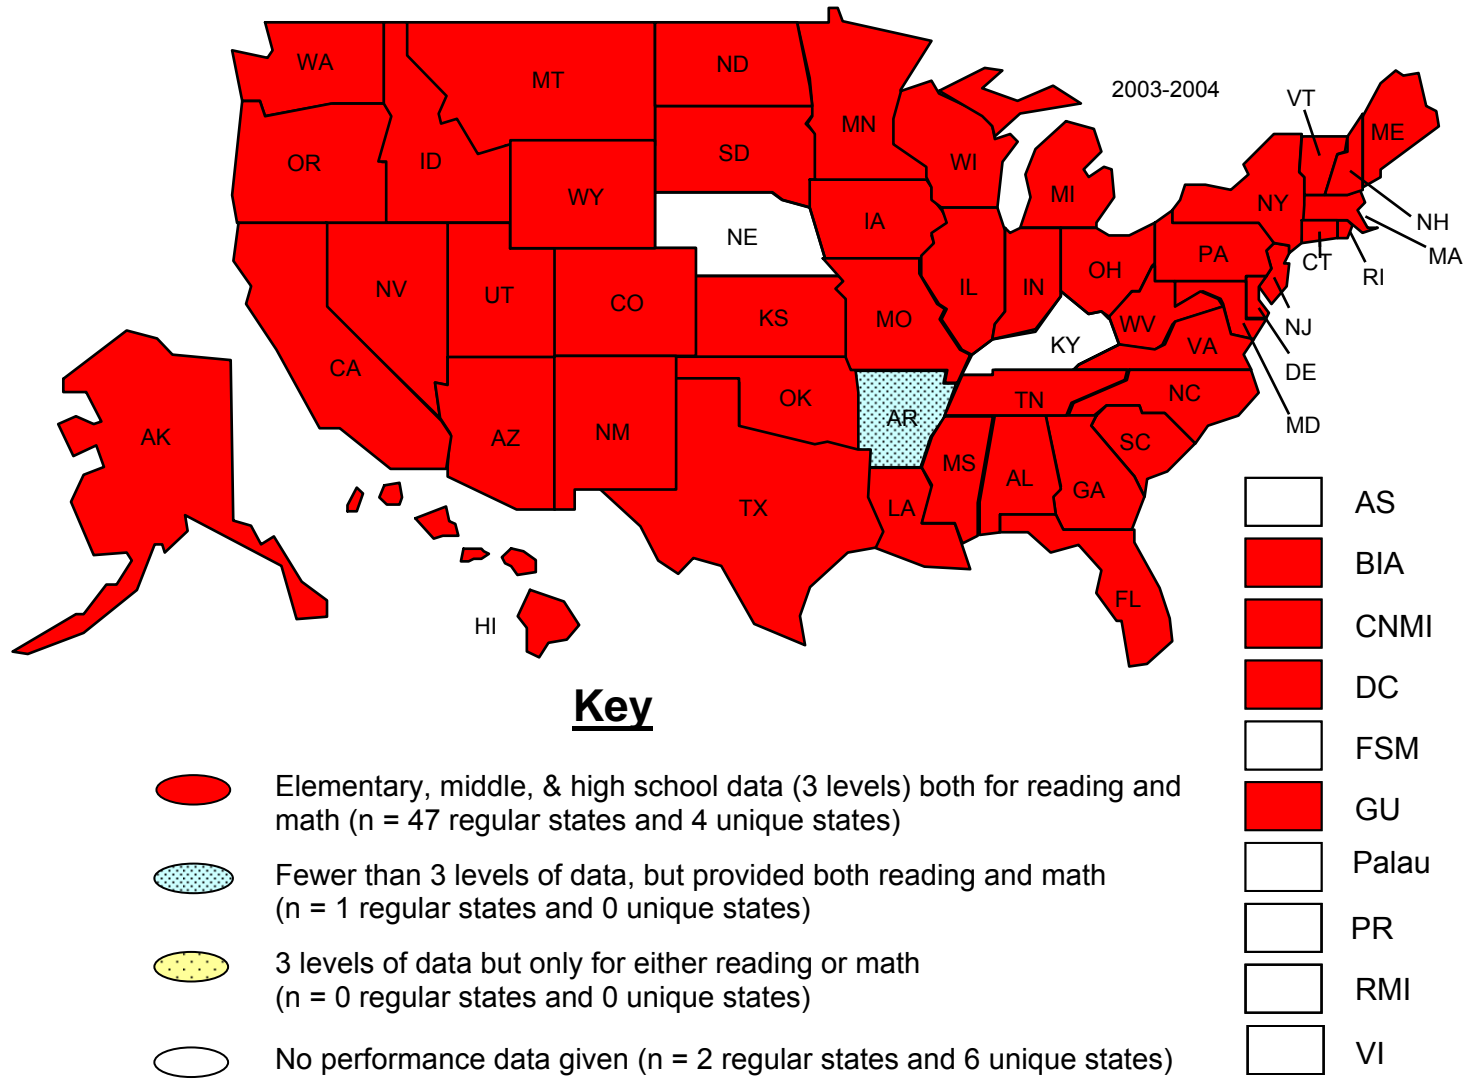

**Explanation:** The calculated percent of students scoring as proficient on state assessments in 2002-2003 was subtracted from the calculated percent of students scoring as proficient on state assessments in 2003-2004 leaving the percent change in proficiency percentage. A (+) indicates improvement, and a (-) indicates a decline in proficiency rate.

# Appendix A

## State-by-State Participation Summary Data

This Appendix presents the state-by-state numbers that were used to generate the participation tables and figures in this document. There are six tables in this Appendix (Tables A1-A6). The two content areas of Reading and Math are shown for each of three grade levels - Elementary School, Middle School and High School. Typically, the grades reflected in these three levels are grades 4, 8, and 10. The specific grade used for each state is shown in Appendix C along with participation data for all of the grades on which a state reported.

Each row in Tables A1-A6 shows numbers for one state at one grade within the content area and school level. The first count shows state reported special education enrollment, that is the number of students with an individualized education plan (IEP). Following that is the number of all students enrolled in the grade. Next are the numbers of students reported as taking each of three kinds of assessments: Regular Assessment, Out-of-Level Test, and Alternate Assessments based on grade-level achievement standards (which are reported only for Massachusetts, North Carolina, and Texas) are included with the regular assessment. Any scores that were invalid either because of problems in the testing process or due to invalidating changes in testing materials or procedures have been left in these participation counts. Consequently, these participation counts may be substantially higher than a count of valid scores would be. (Information about invalid scores is shown in Appendix C.) Alongside each participation count, a percentage is shown that was calculated by dividing the count of participants by the number of students with IEPs. An additional percentage shown for the Alternate Assessment was calculated by dividing the count of participants by the total number of students enrolled in a grade. This additional percentage is provided because discussions about Alternate Assessments often refer to the percentage of total enrollment rather than percentage of IEP enrollment. The last count in each row shows a total count of participants. This was calculated by summing the counts reported as participating in each type of assessment. The associated total participation percentage was calculated by dividing this summed count of participants by the number of students with IEPs. This number is 100% if all enrolled students with IEPs participated in an assessment. Percentages that deviate substantially from 100% could be due to testing practices such as failing to include all students, to issues in data management factors such as determining enrollment numbers at a different time of the year from test administration, or to data tabulation or reporting errors.

The data in these tables were summarized from the data in Appendix C, which were obtained directly from Attachment 3 of the 2003-2004 Annual Performance Reports. Although information from most states permitted the calculations shown in these tables, states did differ in how they completed Attachment 3. All information is from the year 2003-2004. Footnotes indicate states that supplied percentages instead of the counts needed for consistent data analysis and reporting.

Forty-six regular states and five unique states provided data that could be analyzed to fully complete the participation tables for the regular assessment. Forty-three regular states and five unique states provided data that could be analyzed to fully complete the participation tables for the alternate assessment. The reasons that some states did not fully provide performance data were varied. Several states had data missing from one or more grades in one or more content areas or tests. One state provided data from the 2002-2003 school year for one content area area. One state that administered high school end-of-course tests to students in multiple grades did not provide enrollment data that would be needed to estimate the percent of students proficient. And one state was excused from filing an APR in 2003-2004.

At the elementary school level, among the regular states in which a participation rate could be calculated the average participation rate as a percent of special education enrollment for reading was 86% on the regular assessment, 4% on the out-of-level assessment, 7% on the alternate assessment, and 97% overall participation. For math it was 88% on the regular assessment, 3% on the out-of-level assessment, 6% on the alternate, and 97% overall participation. Among the unique states with data, the average participation rate as a percent of special education enrollment for reading was 78% on the regular assessment, 5% on the alternate assessment, and 83% overall participation. For math it was 77% on the regular assessment, 8% on the alternate assessment, and 85% overall participation. When the participation rate is calculated for alternate assessments as a percent of the total enrollment, the average rate is 1.5% for reading and 1.3% for math in the regular states. It is 0.5% for reading and 0.7% for math in the unique states.

At the middle school level, among the regular states in which a participation rate could be calculated the average participation rate as a percent of special education enrollment for reading was 85% on the regular assessment, 5% on the out-of-level assessment, 6% on the alternate assessment, and 96% overall participation. For math it was 86% on the regular assessment, 5% on the out-of-level assessment, 6% on the alternate, and 96% overall participation. Among the unique states with data, the average participation rate as a percent of special education enrollment for reading was 78% on the regular assessment, 6% on the alternate assessment, and 84% overall participation. For unique states in math it was 79% on the regular assessment, 6% on the alternate assessment, and 85% overall participation. When the participation rate is calculated for alternate assessments as a percent of the total enrollment, the average rate is 1.4% for reading and 1.4% for math in the regular states. It is 0.7% for reading and 0.7% for math in the unique states.

At the high school level, among the regular states in which a participation rate could be calculated the average participation rate as a percent of special education enrollment for reading was 82% on the regular assessment, 1% on the out-of-level assessment, 9% on the alternate assessment, and 90% overall participation. For math it was 81% on the regular assessment, 1% on the out-of-level assessment, 9% on the alternate, and 84% overall participation. Among the unique states with data, the average participation rate as a percent of special education enrollment for reading was 62% on the regular assessment, 4% on the alternate assessment, and 67% overall participation. For math it was 63% on the regular assessment, 3% on the alternate assessment, and 66% overall participation.

When the participation rate is calculated for alternate assessments as a percent of the total enrollment, the average rate is 1.1% for reading and 1.1% for math in the regular states. It is 0.5% for reading and 0.4% for math in the unique states.

Across all three school levels, among the regular states in which a participation rate could be calculated the average participation rate as a percent of special education enrollment for reading was 84% on the regular assessment, 3% on the out-of-level assessment, 7% on the alternate assessment, and 94% overall participation. For math it was 85% on the regular assessment, 3% on the out-of-level assessment, 5% on the alternate, and 92% overall participation. Among the unique states with data, the average participation rate as a percent of special education enrollment for reading was 73% on the regular assessment, 3% on the alternate assessment, and 78% overall participation and for math it was 73% on the regular assessment, 6% on the alternate assessment and 79% overall participation. When the participation rate is calculated for alternate assessments as a percent of the total enrollment, the average rate is 1.4% for reading and 1.3% for math in the regular states. It is 0.6% for reading and 0.6% for math in the unique states.

Average percentages were calculated by summing percentages across states and dividing by the number of states that had data. This introduces error due to rounding effect that is especially strong for the unique states because the actual number of students in those states is often quite small. Similarly, regular assessment plus alternate assessment percentages may not sum to the average overall percentages because of rounding error.

<sup>a</sup> Percent of total enrollment equal to the total number of out-of-level assessments plus the alternate assessment on alternate achievement standards divided by the total enrollment.

<sup>b</sup> California reported alternate assessment as one graded against grade level achievement standards.

<sup>c</sup> Complete data were not provided.

## Appendix B

### State-by-State Proficiency Summary Data

This Appendix presents the state-by-state numbers that were used to generate the proficiency tables and figures in this document. There are six tables in this Appendix. The two content areas of Reading and Math are shown for each of three grade levels - Elementary School, Middle School and High School. Typically, the grades reflected in these three levels are grades 4, 8, and 10. The specific grade used for each state is shown in Appendix D along with proficiency data for all of the grades on which a state reported.

Each row in the Tables B1-B6 shows numbers for one state on one content area in one grade. The first count shows state reported special education enrollment, that is the number of students with an individualized education plan (IEP). Following that is the number of all students enrolled in the grade. Next are the numbers of students reported proficient in each of two kinds of assessments: Regular Assessment, and Alternate Assessment. (In contrast to tables showing participation data, no counts are shown separately for out-of-level tests because all achievement results obtained from out-of-level tests were to be counted with alternate assessment results.) Alongside each count, a percentage is shown that was calculated by dividing the count of students reported as proficient by the number of students with IEPs. An additional percentage shown for the Alternate Assessment was calculated by dividing the count of students reported as proficient by the total number of students enrolled in a grade. This additional percentage is shown because the data reporting instructions stipulated that states were to limit the number of students reported as proficient based on Alternate Assessments to no more than one percent of total enrollment as distinct from the percentage of IEP enrollment. The last count in each row shows a total count of students reported as proficient. This was calculated by summing the counts reported as proficient in each type of assessment. An associated total proficiency percentage was calculated by dividing this summed proficiency count by the number of students with IEPs. Note that in addition to any of the factors mentioned in Appendices A and C that may distort participation rates, proficiency rate calculations may be affected by a loss of student data due to invalidated scores or other reasons states may have failed to report achievement results for students who were counted as participating in an assessment. The calculations used in this document provide the most conservative values for proficiency rates given the data that states supplied.

The data in these tables were summarized from the data in Appendix D, which were obtained directly from Attachment 3 of the 2003-2004 Annual Performance Reports. Although information from most states permitted the calculations shown in these tables, states did differ in how they completed Attachment 3. All information is from the year 2003-2004. Footnotes indicate states that supplied percentages instead of the counts needed for consistent data analysis and reporting.

Forty-seven regular states and four unique states provided data that could be analyzed to fully complete the proficiency tables for the regular assessment. Forty-three regular states and four unique provided data that could be analyzed to fully complete the proficiency tables for the alternate assessment. The reasons that some states did not fully provide performance data were varied. Several states had data missing from one or more grades in one or more content areas or tests. One state provided data from the 2002-2003 school year for one content area area. One state that administered high school end-of-course tests to students in multiple grades did not provide enrollment data that would be needed to estimate the percent of students proficient. And one state was excused from filing an APR in 2003-2004.

At the elementary school level, among the regular states in which a proficiency rate could be calculated the average proficiency rate as a percent of special education enrollment for reading was 30% on the regular assessment, 5% on the alternate assessment, and 36% overall proficient. For math it was 34% on the regular assessment, 5% on the alternate, and 39% overall proficient. Among the unique states with data, the average proficiency rate for reading was 9% on the regular assessment, 2% on the alternate assessment, and 11% overall proficient. Average proficiency percentage among unique states for math was 11% on the regular assessment, 2% on the alternate assessment, and 13% overall proficient.

At the middle school level, among the regular states in which a proficiency rate could be calculated the average proficiency rate as a percent of special education enrollment for reading was 20% on the regular assessment, 5% on the alternate assessment, and 25% overall proficient. For math it was 17% on the regular assessment, 5% on the alternate, and 22% overall proficient. Among the unique states with data, the average proficiency rate for reading was 7% on the regular assessment, 3% on the alternate assessment, and 10% overall proficient. Average proficiency percentage among unique states for math was 9% on the regular assessment, 3% on the alternate assessment, and 12% overall proficient.

At the high school level, among the regular states in which a proficiency rate could be calculated the average proficiency rate as a percent of special education enrollment for reading was 19% on the regular assessment, 5% on the alternate assessment, and 25% overall proficient. For math it was 15% on the regular assessment, 5% on the alternate, and 20% overall proficient. Among the unique states with data, the average proficiency rate for reading was 6% on the regular assessment, 2% on the alternate assessment, and 8% overall proficient. Average proficiency percentage among unique states for math was 9% on the regular assessment, 2% on the alternate assessment, and 11% overall proficient.

Among the regular states in which a proficiency rate could be calculated, the average proficiency rate as a percent of special education enrollment for reading was 23% on the regular assessment, 5% on the alternate assessment, and 29% overall proficient. For math it was 22% on the regular assessment, 5% on the alternate, and 26% overall proficient. Among the unique states with data, the average proficiency rate for reading was 7% on the regular assessment, 2% on the alternate assessment, and 10% overall proficient. Average

proficiency percentage among unique states for math was 10% on the regular assessment, 2% on the alternate assessment, and 12% overall proficient.

Average percentages were calculated by summing percentages across states and dividing by the number of states that had data. This introduces error due to rounding effect that is especially strong for the unique states because the actual number of students in those states is often quite small. Similarly, regular assessment plus alternate assessment percentages may not sum to the average overall percentages because of rounding error.

**Table B1: Elementary School Reading Performance**

<sup>a</sup> Alternate assessment proficiency equal to the total number of out-of-level assessments and alternate assessments on alternate achievement standards scored as proficient.

<sup>b</sup> California reported alternate assessment as one graded against grade level achievement standards.

<sup>c</sup> Complete data were not provided.

## Appendix C

### State-by-State Participation Raw Data

This Appendix presents the state-by-state raw data that were the source of summary data for Tables A1-A6 of Appendix A, which in turn were used to generate the participation tables and figures in the main body of this document. There are six tables in this Appendix. Each table shows either reading or math participation counts for all grades within a school level for each state. The specific grades that were used in Appendix A and in the main document are indicated by an asterisk next to the grade level.

Each row in the six tables shows numbers for one state on one content area in one grade. The first count shows state reported special education enrollment, that is the number of students with an individualized education plan (IEP). Following that is the number of all students enrolled in the grade. Next are three sections of the table that show numbers of students reported as taking each of three kinds of assessments: Regular Assessment, Out-of-Level Test, and Alternate Assessment. For the Regular Assessment, the first number shows the Total number of students who took that assessment. This total is the number used in Appendix A for reporting participation. Next to that is the number of students who took the regular assessments with accommodations. The next column lists those whose test results were invalidated because of changes in testing materials or procedures such as nonstandard accommodations or modifications that result in a score that is not comparable to scores received by students who took tests without these changes. The abbreviated heading on this column indicates that these might be called “Invalid Practice” counts. Next to that is a column that shows the count of students whose results were invalid because of problems in the testing process such as students failing to fill out an answer sheet correctly. The abbreviated heading on this column indicates that these might be called “Invalid Process” counts. Note that invalid practice and invalid process counts have not been removed from participation counts. Participation rates would be reduced if invalid results were excluded. The Out-of-level test section shows the same data in the same order as regular assessments except that there is no column for reporting a number of students using accommodations.

As with Regular and Out-of-Level assessments, the first column for Alternate Assessment shows the Total number of students who received that kind of assessment, but the succeeding columns follow a different pattern. The next column for Alternate Assessment shows the number of students whose assessment was scored against grade level standards. The next column for Alternate Assessment shows the number of students whose assessment was scored against alternate achievement standards. Following this column is a column that shows the number of students that states counted in the lowest achievement level to avoid exceeding a cap of one percent of students reported proficient based on alternate achievement standards. The last Alternate Assessment column shows the number of students whose results were invalid because of problems in the testing process. No data were solicited for reporting how many scores were invalidated because of changes in testing materials or procedures for Alternate Assessments.

The next section in these tables shows three columns for reporting counts of students who did not take any assessment. The columns labeled “Parental Exemption” and “Absent” are self explanatory. The remaining column, labeled “Other Reasons,” shows counts of students who were not assessed for reasons other than parental exemption or absence for most states. In cases where states did not distinguish Parental Exemption and Absent from other reasons for not assessing students, the Other Reasons column shows all of the students reported as not assessed.

The final column in these tables is “Row total.” The number in this column is equal to the sum of the number of students tested on any assessment plus those reported as not tested due to “parental exemption”, “absent”, and “other reasons.” “Row total” does not always equal the number of students with IEPs.

The data in these tables were obtained directly from Attachment 3 of the 2003-2004 Annual Performance Reports. The columns in this appendix are in the same order and use the same column numbers as the Attachment 3 document that states completed. Some column labeling has been added to improve clarity or abbreviated to meet space limitations. Differences in how states completed Attachment 3 complicate the interpretation of some data. All information is from the year 2003-2004.

VI <sup>c</sup>																			

\* Grades that were used in Appendix A and in the body of this document are indicated by an asterisk next to the grade level.

<sup>a</sup> Row total is equal to the sum of the number of students tested on any assessment plus those not tested due to parent exemptions, those absent on testing day, and those who were not tested for other reasons.

<sup>b</sup> California reported alternate assessment as one graded against grade level achievement standards.

<sup>c</sup> Complete data were not provided.

**Table C2: Middle School Reading Participation**

\* Grades that were used in Appendix A and in the body of this document are indicated by an asterisk next to the grade level.

<sup>a</sup> Row total is equal to the sum of the number of students tested on any assessment plus those not tested due to parent exemptions, those absent on testing day, and those who were not tested for other reasons.

<sup>b</sup> California reported alternate assessment as one graded against grade level achievement standards.

<sup>c</sup> Complete data were not provided.

## Appendix D

### State-by-State Performance Raw Data

This Appendix presents the state-by-state raw data that were the source of summary data for Tables B1-B6, which in turn were used to generate the proficiency tables and figures in the main body of this document. There are six tables in this Appendix. Each table shows either the reading or math performance counts for all grades within school level for each state. The specific grades that were used in Appendix B and in the main document are indicated by an asterisk next to the grade level. The performance levels considered “proficient” by the state for both the regular and alternate assessment are shaded.

Each row in the tables shows numbers for one state on one content area in one grade. The first count shows state reported special education enrollment, that is the number of students with an individualized education plan (IEP). Following that is the number of all students enrolled in the grade. Next are two sections of the table that show the performance of students on two kinds of assessments: Regular Assessment and Alternate Assessment. Both the Regular Assessment and the Alternate Assessment sections are divided into five columns to show counts in up to five levels of achievement. No states reported more than five levels of achievement. The levels of achievement that a state considers proficient or higher are shaded. Except where data reporting issues prevented it, values in the shaded cells were summed to produce the proficiency counts that are displayed in Appendix B. Results from students who took Alternate Assessments on grade level standards included with Regular Assessment data. Similarly, results from Out-of-Level tests were included with Alternate Assessment data.

The data in these tables were obtained directly from Attachment 3 of state’s 2003-2004 Annual Performance Reports. The columns in this appendix are in the same order and use the same column numbers as the Attachment 3 document that states completed. Some column labeling has been added to improve clarity or abbreviated to meet space limitations. Differences in how states completed Attachment 3 complicate the interpretation of some data. All information is from the year 2003-2004 except for one state whose data is not included in this document but are indicated by footnotes in this table. Footnotes also indicate states that supplied percentages instead of the counts needed for consistent data analysis and reporting. Counts and subsequent calculations are imprecise for some states in some grades where different assessments were administered in different grades. In those cases, numbers for a single grade may have been established by averaging data or by selecting a representative value.

\* Grades that were used in Appendix B and in the body of this document are indicated by an asterisk next to the grade level.

<sup>a</sup> Alternate assessment proficiency equal to the total number of out-of-level assessments and alternate assessments on alternate achievement standards scored as proficient.

<sup>b</sup> California reported alternate assessment as one graded against grade level achievement standards.

<sup>c</sup> Complete data were not provided.

**Table D2: Middle School Reading Performance**

\* Grades that were used in Appendix B and in the body of this document are indicated by an asterisk next to the grade level.

<sup>a</sup> Alternate assessment proficiency equal to the total number of out-of-level assessments and alternate assessments on alternate achievement standards scored as proficient.

<sup>b</sup> California reported alternate assessment as one graded against grade level achievement standards.

<sup>c</sup> Complete data were not provided.

\* Grades that were used in Appendix B and in the body of this document are indicated by an asterisk next to the grade level.

<sup>a</sup> Alternate assessment proficiency equal to the total number of out-of-level assessments and alternate assessments on alternate achievement standards scored as proficient.

<sup>b</sup> California reported alternate assessment as one graded against grade level achievement standards.

<sup>c</sup> Complete data were not provided.

\* Grades that were used in Appendix B and in the body of this document are indicated by an asterisk next to the grade level.

<sup>a</sup> Alternate assessment proficiency equal to the total number of out-of-level assessments and alternate assessments on alternate achievement standards scored as proficient.

<sup>b</sup> California reported alternate assessment as one graded against grade level achievement standards.

<sup>c</sup> Complete data were not provided.
